

The Meuse and his effluents flow calm sometimes wild  
From France to the North-sea meandering around  
She's connecting the people the animals and plants  
In these beautiful surrounding inspiration is found

Reffr:

So for now and forever (handclap 4 times) Amice will sustain  
And our co-o-peration will always remain

Due to global warming the climate will change  
The discharge of the river will severely derange  
Serious droughts and the rain will pour  
So we are told by the famous Al Gore

If we work together on a river basin scale  
a sustainable and secure water future won't fail  
No borders one river and all share one goal  
United we stand and divided we fall

A transnational roadmap for adaptation is found  
Measures for low flows and floods all around  
Knowledge and experience between partners exchanged  
And the people of the Meuse-basin are all engaged

New challenges in future coming up in Meuseland  
Integration with the frame work is already planned  
Together w'll search for the measures that match  
And the Meuse will be adapted to climate impacts
